

ASUCD: Aggie Reuse

WQ26 Donor Analysis

Created by: Alexander Cai

Introduction

Brief Overview:

Project Details	What/Why a Donor Analysis?
Timeline & Details	How long did the project take?
Analysis	What did we observe?
Research Questions	What questions can be answered using statistical tests?
Conclusion	Why does this matter?
Resources	Where can I find everything?

01

Project Details

Details

What is a Donor Analysis?

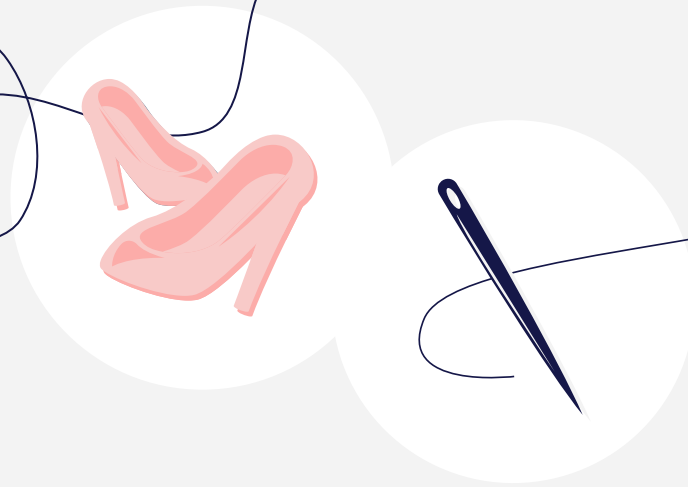

Without the support of donors, ARS would be unable to run their storefront entirely. This project aims to identify patterns and predict future trends.

Why is this important?

Knowing your demographics can:

Better understand donors → Improve outreach
(donors) → Increase donations → More Patrons!

02

Timeline & Details

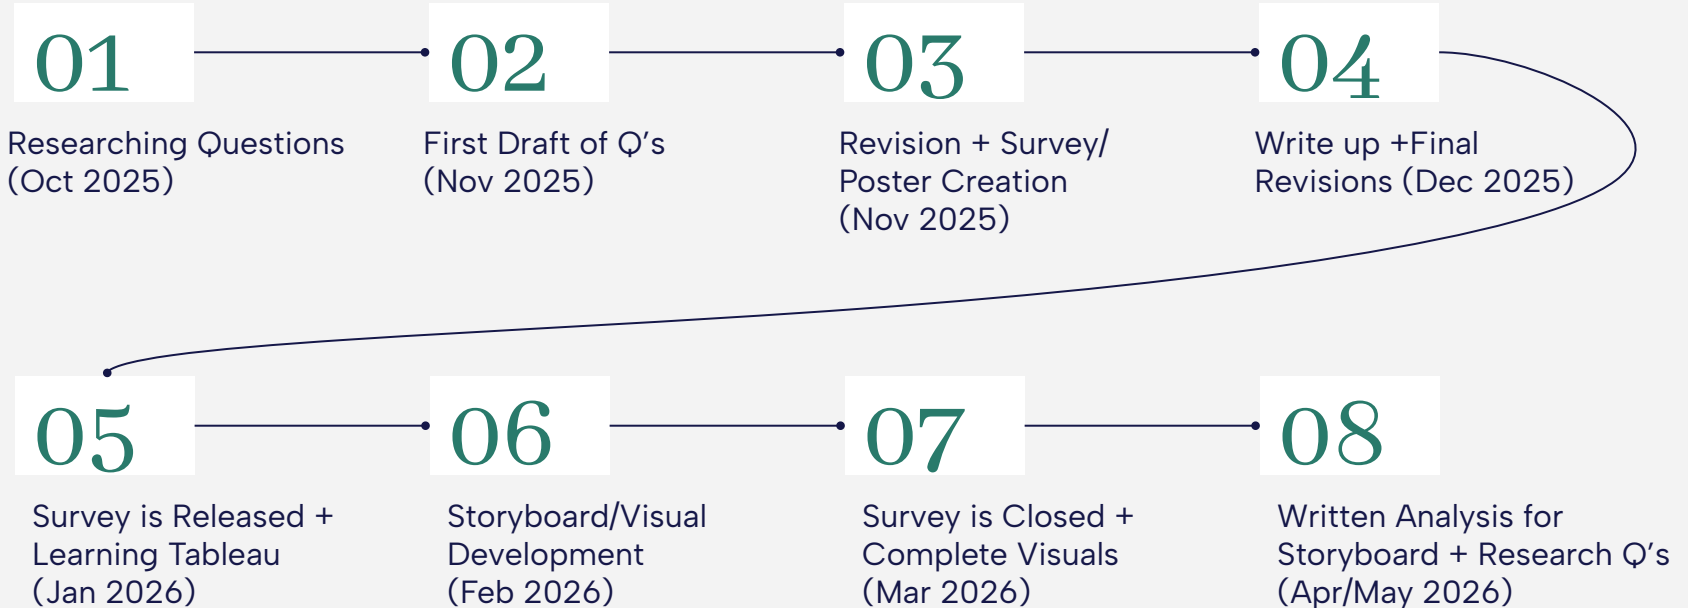

Goals:

Quarter:	Goals:
FQ25	Design & Plan the Project
WQ26	Distribute Survey & Begin Analysis
SQ26	Finalize Analysis & Write ups.

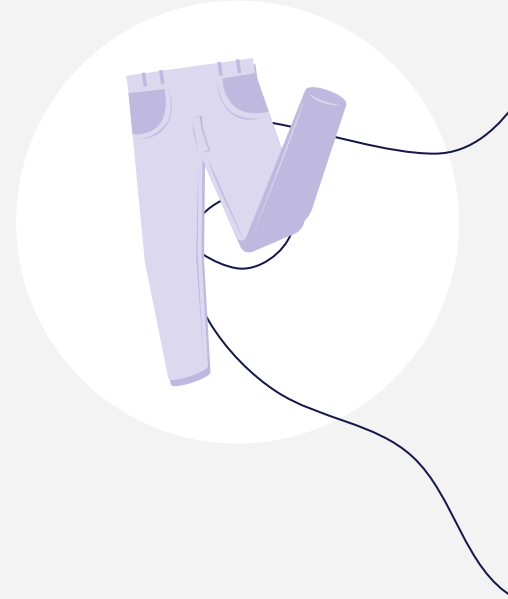

Qualtrics: Survey
Python: Stat. Testing
Tableau: Graphical
Analysis

Development Timeline

Additional Details:

- The survey was open from **1/16 -3/20**
- Distributed via QR code in store
- Not entirely accurate, not all donors:
 - Filled out the survey
 - Completed survey
 - Were truthful (i.e, miscount donations)

03

Analysis

Donations by Date:

Observations:

- 398 Total Items Donated!
- 231 Items on 1/29 (58% of total)

Analysis:

- 1/29 donations likely because:
 - 15% Yesterday, Vintage (1/23)

Takeaway:

- Donor events drive A LOT of donations!
 - Perform more in the future

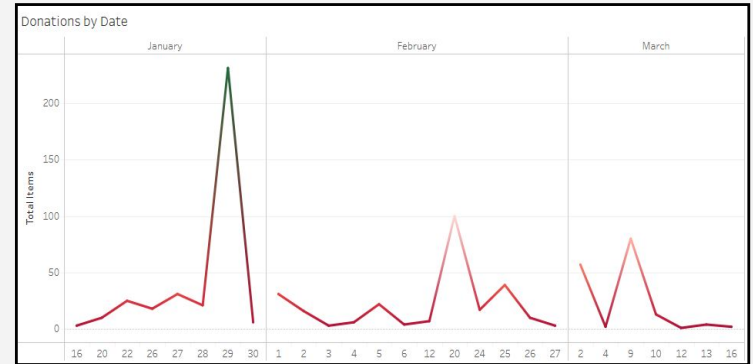

Figure 1: Time series of donations by month/day

Donations by Reason:

Observations:

- 65% Donate to Declutter Home
- 58% Support Sustainability

Analysis:

- Donors are environmentally friendly and space-conscious

Takeaway:

- Donors are empathic and mindful.

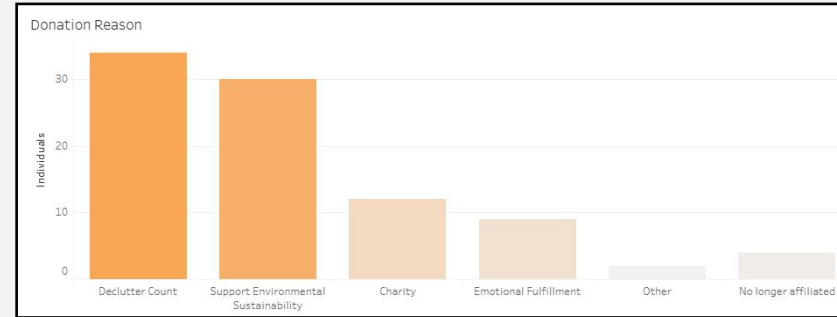

Figure 2: Bar chart showing donations by reason

Note: Donors can select more than one reason to donate (overlap)

Donors by Gender/Role:

Observations:

- Majority of donors are:
 - Female (79%)
 - Students (67%)

Analysis:

- Women tend to have more clothing + Mostly Donating to Declutter = Large Female Donor Base.
- Community Members donated on average 5x more clothing than Students

Takeaway:

- Attempt to appeal to a male demographic
- Community Members are valuable donors

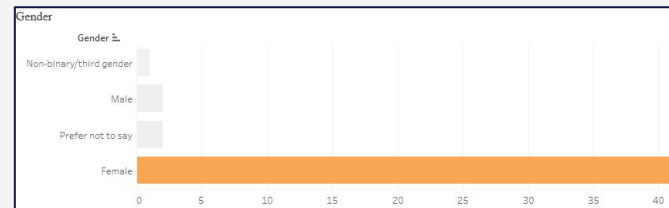

Figure 3: Bar chart showing donors by gender

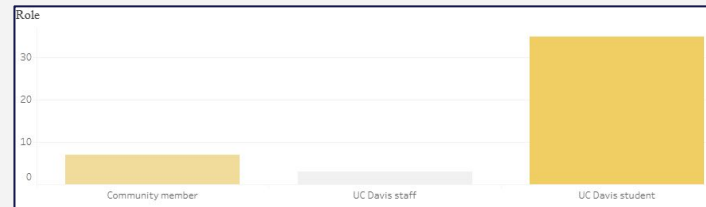

Figure 4: Bar chart showing donors by role

Donors by College/Year:

Observations:

- Majority of Donors are:
 - Freshmen/Seniors (34%/29%)
 - L&S and AAES (37%/31%)

Analysis:

- Freshmen likely donate due to tight living conditions (dorms) and future move.
- The “connection” AAES students have to ARS is likely why students donate.

Takeaway:

- Target freshmen/senior events
- Continue to promote environmental friendliness

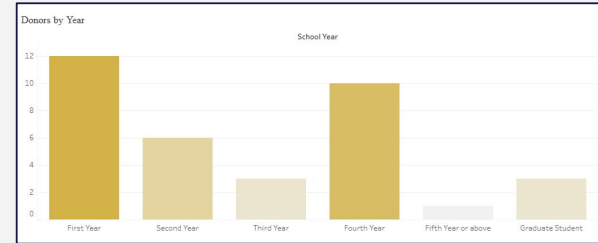

Figure #5: Barplot of donors by school year

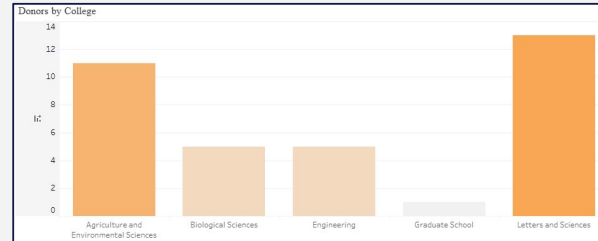

Figure #6: Barplot of donors by college

Donors by Store Metrics:

Observations:

- 42% find ARS by walking by
- 62% visited < Once per Quarter

Analysis:

- Most donors find ARS purely by chance
- Majority of donors visit ARS before donating

Takeaway:

- The location (MU) is one of ARS's largest assets.
- Promote donating to customers

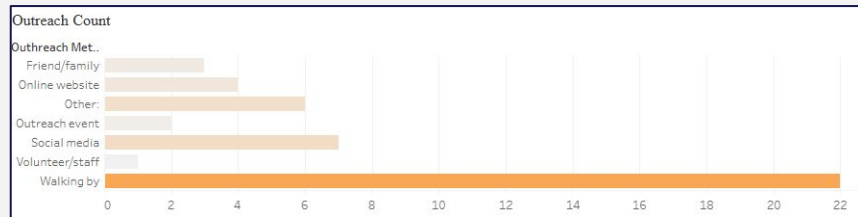

Figure 6: Bar chart showing outreach effectiveness

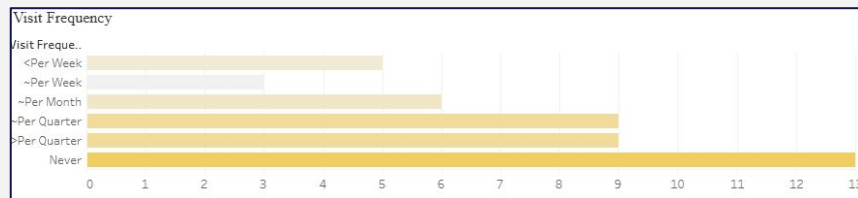

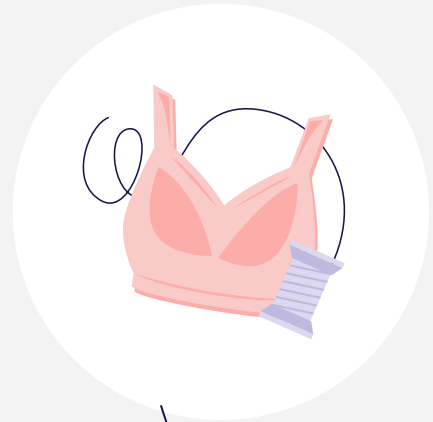

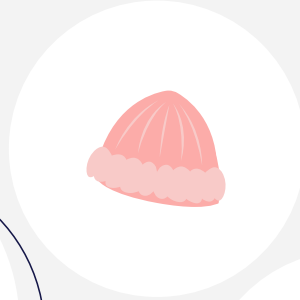

Figure 7: Bar chart showing donor frequency

04

Research Q's

Introduction

What are Research Q's?

The following analysis attempts to answer hypothesis using statistical testing. The questions were answered through Python (programming language)

Is There an Association Between Donors & Motives?

What?:

- Explores if donor roles donate for specific reasons

Why?:

- ARS can cater to specific motives to drive engagement with distinct audiences

Result:

- Using Chi-Squared Test (Independence)
 - Our test found donors do not have varying motives.

Takeaway:

- Most donors (regardless of type) donate for similar reasons.

Note: donor roles include student, staff, and community member

Do More Visits to ARS Yield More Donations?

What?:

- Examines if donors will offer more based on shopping frequency

Why?:

- If true, ARS could retain customers in hopes for future abundant donations

Result:

- Spearman's Rank Correlation
 - Our test found donors donate less the more they visit.

Takeaway:

- Expect large donations from unfamiliar faces.

05

Conclusion

Conclusion:

- 1) Donors are Environmentally Friendly.
 - a) Many Donors are about the environment, whether this is through motives or their major.
- 2) Promote to Community Members
 - a) Through our small sample, it's evident community members are generous donors, and have a lot to give.
- 3) Events Drive Engagement
 - a) The number of donations on 1/29 is likely correlated to the Yesterday Vintage collab. If donors have an incentive, they will donate in droves.

Conclusion:

4) Target “Movers”

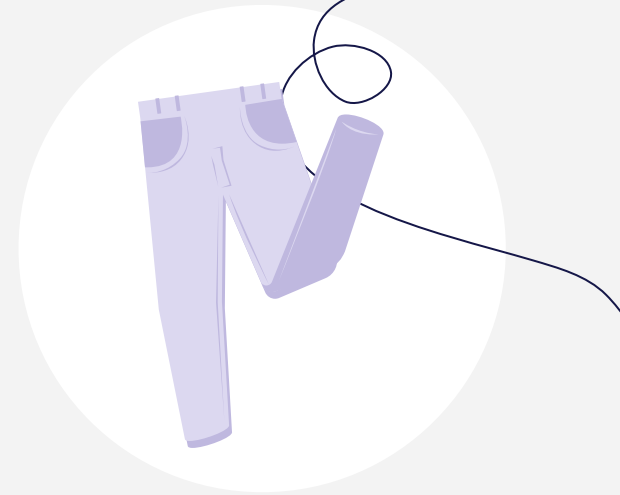

- a) A large majority of donations came from audiences who need to move/limited in space.

5) The MU is Powerful

- a) ARS’s location inside the MU has proven to draw in more customers than any other outreach method.

5) Fruitful Donors Don’t Visit

- a) The less someone visits ARS, the more items they are likely to donate.

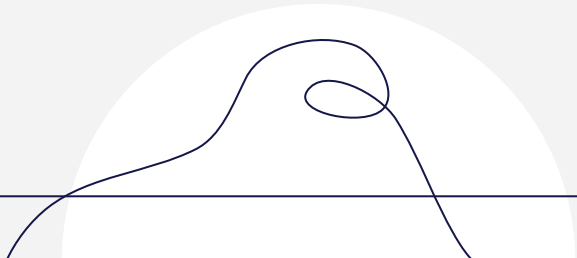

Thank You!
